

## RNA Registry, Managed by QCHF

The Quality Care Health Foundation (QCHF) has established a statewide registry for Restorative CNAs trained using the QCHF RNA Curriculum. This is a voluntary process.

The value of the RNA Registry is that it provides a central system for identifying and recognizing graduates of the QCHF RNA Curriculum. This makes the certification universal, and allows individual RNAs to carry their certification with them as they move to new assignments.

The process works in the following manner:

1. A training agency that utilizes the QCHF RNA Curriculum conducts a training program.
2. The training agency sends a list of students who have successfully completed the training to QCHF. The documentation must include the following:
  - The names of the individuals who successfully completed training, along with their CNA Certification Number (for RNAs) or Nursing License Number (for RNPC), employer name, and employer contact information (address, phone, e-mail). This can be submitted as a list in grid format.
  - The date and location that the training was conducted.
  - The name, licensure data and signature of the lead instructor.
  - A payment of \$25 per student, payable to QCHF.
3. The training agency will receive the following from QCHF:
  - An enameled lapel pin for each student (blue with RNA or purple with RNPC).
  - A certificate, suitable for framing with their RNA Number.
  - A laminated wallet card with their RNA Number.

The contact at QCHF for this process is:
